# ADB Strategies for Digital Health

# Digital Technology Directional Guide: priority areas

## Integrate Digital Strategies for Development in Operations

- **Develop digital strategies** in line with the operational plans of Strategy 2030.
- Undertake country-level digital development **readiness assessments** to identify and develop robust pipelines for digital interventions in operations.

## Improve the Quality of Digital Development Interventions

- Develop the institutional and human **capacities of DMCs** to maximize the benefits of digital technologies and achieve development goals.
- Promote **knowledge sharing** on digital technology trends, options, projects, and policies to enhance DMCs' readiness for digital development.
- Explore innovative options to **mobilize public and private resources** in expanding the digital infrastructure to rural and remote areas and providing essential digital services. Promote and scale up innovative digital technologies in operations.
- Leverage ADB's technical assistance for digital development support in operations.
- Utilize **strategic knowledge partnerships** for learning, capacity building, and innovation, particularly in the use of frontier technologies such as artificial intelligence.

# Guidance Note on Digital Health

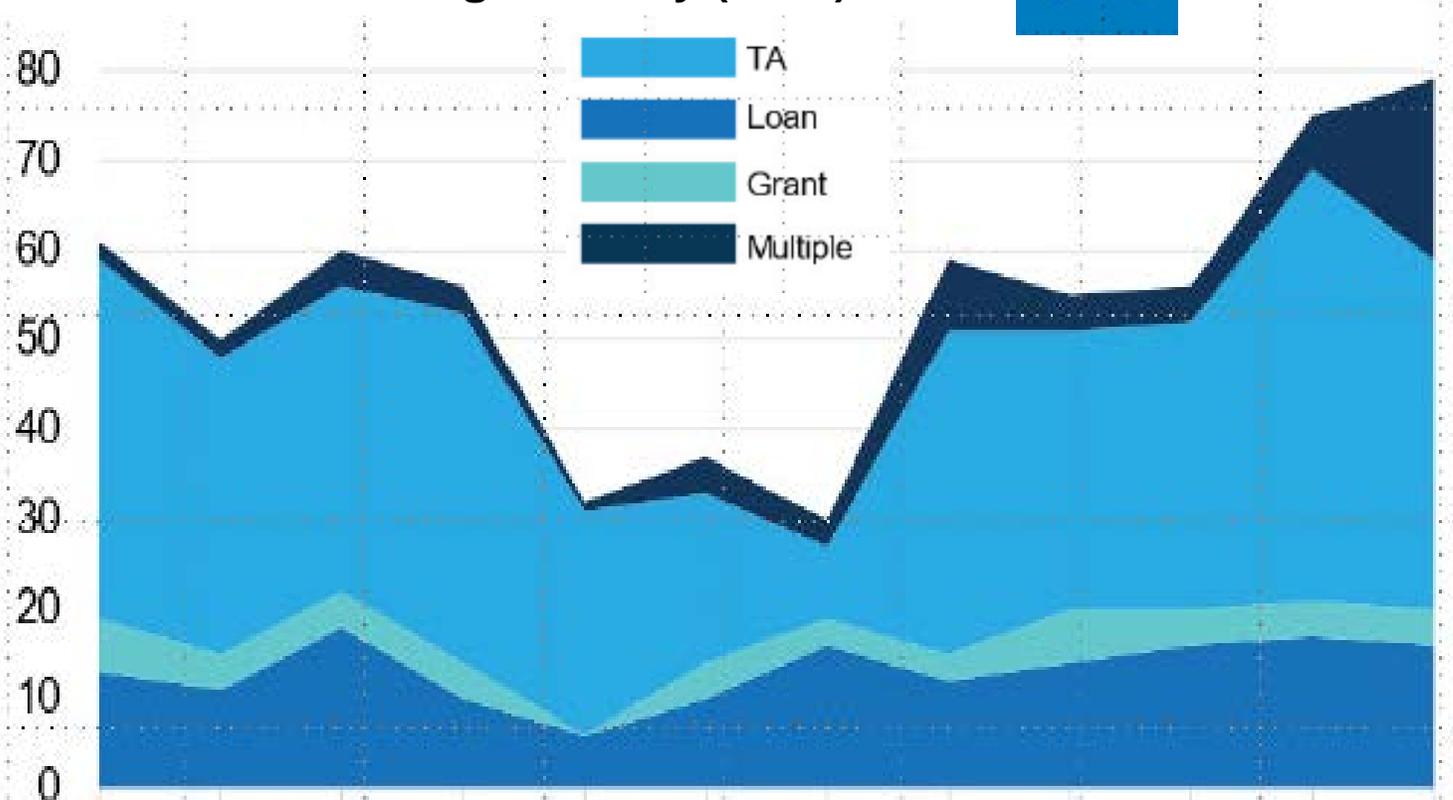

Provides **how-to manual** to invest in digital health projects

Rests on developing a **Digital Health Impact Framework** and weighing different options based on various dimensions.

- **Strategy.** Fit to the national and digital health strategy objectives; identify benefits in terms of quality, access, and efficiency (Appendix 2).
- **Socioeconomics.** Determine the estimated socioeconomic *impact* for each option that combines into the impact for the whole strategy, including the proposed digital health solutions, stakeholder types, **costs**, **benefits**, net benefits, and **VFM**, for all investment options and their **timelines**, and for all stakeholder types.
- **Financial impact.** This includes additional **extra capital and operational cash flows** for all stakeholder types and income and expenditure, using the accruals methodology, compared with budgets, financial plans, and other sources of finance, to estimate affordability.
- **Human digital health capacity.** Requirements for leadership and management to ensure effective decision-making, stakeholder engagement, planning, development, risk mitigation, procurement, implementation and project management, operation and utilization, and changing management and benefits realization of the strategic goals.
- **Commercial implications.** Changes to health care pricing, relationships with partners and thirdparty payers.

# ADB Funding modality for ICT related projects

Number of ICT related project per funding modality (2021)

Source: ADB (2021). Digital Technology for Development Directional Guide. Manila  
<https://www.adb.org/documents/strategy-2030-digital-technology-directional-guide>

## Funding sources for Digital Health

- ADB Core Funding
- Japan High Level Technology Fund (HLT)
- Japan Fund for Prosperous and Resilient (JFPR)
- North American Aerospace Defense Command (NORAD)
- U.S Department of State (PEPFAR)
- U.S. Agency for International Development (USAID)
- Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ)
- Global Fund
- World Bank
- Co-financing with private sectors

# ADB Supported Investment Projects in Asia and the Pacific

## Investment Projects

### Hubei Yichang Comprehensive Elderly Care Demonstration

- People's Republic of China
- Loan (\$150 million)
- 2018- 2022

### Introducing eGovernment through Digital Health

- Tonga
- Grant (\$7.5 million)
- 2019- 2023

## Themes and outputs

- Developed an elderly care ICT platform to
  - Exchange of information
  - Monitor elderly care services
  - Link elderly care and health services
- Scale up training institutions to apply digital elderly ICT platform.

- Reviewed ICT legislation and regulatory framework
- Setup e-Health governance mechanism
- Developed gender sensitive digital health strategy
- Established interoperable digital Health Information System (HIS)
  - Registries (patients, facilities, workforces)
  - Health informatics standards & disease classification
  - Web PAS using electronic health records

## Equitable outcomes

- ICT platform linked elderly cares system between home-based, community, primary health care services and geriatric hospitals
- The ICT platform improved:
  - 10% of service providers skills,
  - 25% of elderly care training,
  - 20% of elderly service utilization

- Designed and implemented cost-effective digital HIS
- Improve utilization of digital health data in enabling legal, regulatory and policy environment.
- Improved gender equity in health service delivery through digital HIS and eGovernment initiatives.

# ADB Supported Investment Projects in Asia and the Pacific (Ongoing)

## Loan Projects (Ongoing)

- **Supporting Essential Health Actions and Transformation Program (Indonesia)**
- Loan (\$300 million) 2023-2027

- **Greater Mekong Subregion Border Health (Lao PDR)**
- Loan (\$25 million) 2024- 2028

## Themes and outputs

- Develop integrated health information system in primary care facilities for data collection, compilation and analysis.
- Integrate primary health care data to public health laboratory services

- Developed electronic medical record (EMR) and unique health identifier (UHI)
- Deliver training and digital literacy on EMR and UHI.

## Equitable outcomes

- Digital platform will link primary health care databased to the MOH's digital health platform to support Goal 3 of SDG

- The first EMR and UHI which will link patient information to UHC and quality health care services

# ADB Supported Technical Assistance Projects

## Technical Assistance

### Digital Technology to Improve National Health Insurance (NHI) in Asia and the Pacific (Regional TA)

- Armenia, Lao PDR, Nepal, Mongolia, Bangladesh, Philippines, and Viet Nam

## Themes and output

- Landscape analysis for digitalization of National Health Insurance (NHI)
- Develop digital NHI Information Management System
- Digital reporting system for resource allocation and drug utilization

## Equitable outcomes

- Improve NHI coverage to households in vulnerable population
- Cost-efficient resource allocation to improve quality health care

### High Level Technology

- Lao PDR
- Philippine
- Cambodia

- **Lao PDR:** Establish electronic procurement system interoperable to DHIS-2
- **Philippine:** Develop digital tools to enhance electronic procurement system and national health repository
- **Cambodia:** Develop mobile apps for early warning rapid alert response and hospital information system

- Improve electronic procurement system by integrating national health information system
- Improve pandemic preparedness and response system at provincial and border hospitals

### COVID-19 Remote and Offsite Monitoring Application Systems (CROMA) Thailand

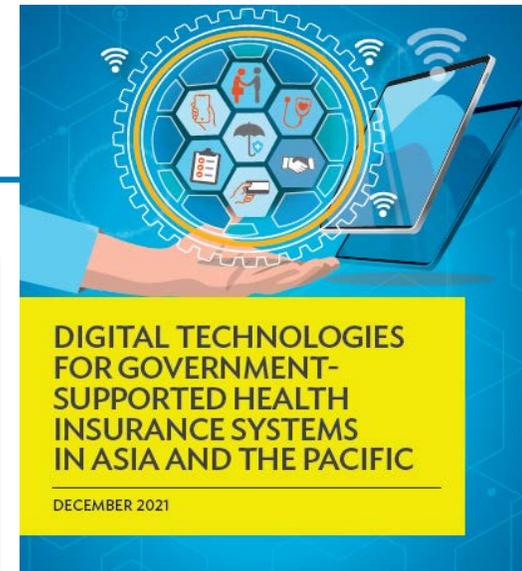

- (CROMA) Thailand

- Monitored vital signs remotely by AI. (ECG, Heartrate, SPO2, Temperature)
- Analyzed, process stored data at cloud and transmitted to health care providers

- Improve health services and reduce the risk of COVID-19

DIGITAL TECHNOLOGIES FOR GOVERNMENT-SUPPORTED HEALTH INSURANCE SYSTEMS IN ASIA AND THE PACIFIC
